Queueless - A Smart Online Queue Management System

Feature 1- Queue/Appointment Notifications

Technique: Equivalence Partitioning (EP)

Partition	Description	Example
P1	Queue turn is approaching	Customer is 2 positions away
P2	Queue turn is not approaching	Customer has many people ahead
P3	No active queue/appointment	Customer is not currently in a queue

Final Designed Test Case :

Field	Details
Test Case ID	TC-QUEULESS-EP-09-01
Test Scenario	Verify that the system sends a notification when the customer's queue turn is approaching.
Preconditions	1. Customer account is active and logged in. 2. Customer has joined a virtual queue. 3. Customer has an active digital token. 4. Other customers are ahead in the queue.
Test Steps	1. Join a virtual queue. 2. Check the current queue position. 3. Process the customers ahead of the customer. 4. Observe the notification when the turn approaches.
Input Data	Queue Position: 2
Expected Result	The system sends a notification informing the customer that their queue turn is approaching.
Actual Result	To be completed during test execution
Status	Pass / Fail
Remarks	Validates the representative value from the valid EP partition where the customer's queue turn is approaching.

Feature 2— View Appointment & Queue History

Technique: Boundary Value Analysis (BVA)

Test Value	Meaning
29	Just below boundary
30	Boundary
31	Just above boundary

Final Designed Test Case :

Field	Details
Test Case ID	TC-QUEULESS-BVA-10-01
Test Scenario	Verify that the system handles the maximum number of history records correctly.
Preconditions	1. Customer account is active and logged in. 2. Customer has appointment/queue history. 3. History limit is defined as 30 records.
Test Steps	1. Log in to the system. 2. Navigate to Appointment & Queue History. 3. Access the history containing 31 records. 4. Observe the displayed history.
Input Data	History Records: 31 Boundary: 30 records
Expected Result	The system handles the history according to the defined 30-record limit and does not exceed the permitted boundary.
Actual Result	To be completed during test execution
Status	Pass / Fail
Remarks	Validates the boundary value 30 + 1 using BVA.
